# How to make a drum set out of recycled materials

How to make drums out of recycled materials.

Start preparing that bus tour! Margo Gothelf 11 months ago crafted with recycled material. It's much more easily than you think. Some boxes, elastic and strings can go very far. An easy way to recycle these materials is to transform them into musical instruments. Give a look at the suggestions below to see how you can start your own family band from the comfort of your home. Then start preparing that bus tour! A guitar is a must-have when you start a family band. Fortunately, you won't have to choose between an electric or acoustic with this practical tutorial. Just collect a snack or empty shoe box, some rubber bands, adhesive tape and a cardboard tube. The rubber bands will act as a guitar strings, making for some strong tracks. Once you have your guitar ready for use, it's time for another string tool. A banjo is the perfect companion of a guitar, and to make it, you will need lids of jars, big sticks of icicles and elastic. Check the complete tutorial here to get strumming. After your guitarist will be lined up, you'll have to find a drummer. The battery keeps the rhythm for the band, so it is important to make sure you can feel strong and clear. There are many different types of drums, but you will want to start with a "traditional." This set can be done using different cans and balloons in order to vary the sound of the drum. The percussion section would not be complete without some dishes, maracas and a tambourine. These add-ons for the drum section are simple to do and allow family members to get quite creative. Use recycled water bottles and dry beans or staples to create maracas, and paper plates and strings to make a tambourine. For dishes, just color on two old CDs. Although they will not emit the traditional sound of the dishes, they will be fun to decorate with markers. Depending on the type of music that your family band is looking for, a windscreen could be useful. To make a flute, you will have to have a cardboard tube from a roll of absorbent paper. Decorate the tube as you want with markers, paints, or even some glitter glue. Then poke some holes at the top to create a place for the sound to go out. You can follow the complete tutorial here. A pan flute may not be the most recognizable tool in the family band, but it will certainly be the easiest to make. For a recycled pan flute, you need a handful of straws (paper or plastic you're going well), a bit of tape, a scissor and a ruler. Watch this video to get the active and working pan flute. Now that you have your ready and functioning tools, we bring the band to the next level. First, do the family on a name. Make sure it's one to remember. Then, take out some songs to play on the tour. Once you have some numbers ready for that ladder, you're ready to go to the band's outfits. Let everyone show up with their look or that everyone co-ordinates their clothes. After a few more tests, it's time for the show! Invitation Friends or make a music video to send to the family. This will be a performance to remember. Children love music and slamming on pots, pans and plastic containers. Combine their creativity with their musical talent making this adorable homemade drum. What you will need: Aluminum coffee can with plastic lid 2 sheets of yellow building construction paper 1 sheet tan felt 1/2 magenta sheet Magenta felt yarn 1 Rubber scissors for scissors glue white glue 2 Wooden plugs 2 foam balls Small in size of the blue yarn How to do it: Remove the coffee cover can and set aside for a later step. Cover the can side with yellow construction paper. Use Glue Stick to apply the glue throughout the construction paper, then press on the can of the coffee. Using white handcraft glue, draw diagonal lines on yellow building paper. Start at the bottom, go up a tilted upwards, and then go down from there to an inclined, creating a triangle. Continue this scheme all around the can. Using magenta colored yarn, follow the glue lines and apply on the can. Do not cut the thread into pieces; Simply follow the lines, gently pressing the wire into the glue while you go. Cut only once at the end. Lay tan felt on the work surface. White tube glue around and on the top of the plastic cover. Place the plastic cover to head down in the center of the tanning felt. Use scissors to cut out the plastic cover, leaving a 1-2 inch edge. Place the covered plastic cover in felt on coffee can and safe. Wrap the rubber band around the coffee can, fix the tanning felt edge on the side of the can. Gently pull the tight felt so that the upper part is smooth. Size two wide strips from 1/2 inches from the Magenta felt, enough to get around the coffee can in the bottom and up, around the tan felt, covering the rubber band. Paste in place with white handcraft glue. To make the chopsticks, gently insert the end of a dowel into the foam ball. If you press too hard and the dowel passes through, paste it together. Remove the dowel, then add a white glue to the hole. Reinsert the dowel. Cover the foam ball with white glue and wrap blue yarn around it until the ball is completely covered. Put some glue on the dowel just under the ball and wrap an excess thread around it. Size and smooth in position with your fingers, make sure the end of the yarn is not attached. Allow everything to dry before playing your new drum! Useful suggestion: take this project to the next level, have a parent poke a hole on each side of the can before you start. After gluing the construction paper, find the holes and hit, then insert a long piece of rope or yarn through both sides to create a band to get around the neck. Ensure the ends by linking therefore together within the possible, then complete the project. This project was created by Amanda Formaro, originally for Kaboose / Spoonful. Art Projects Crafts Handicrafts Father's Daypreschoolersballoons Music Painting Can Can UpcycleUcycle your soup and vegetable cans in tin tin battery This super fun art activity! We stayed on a tin can binge, so Henry and I also had to do these drums from cans of cans! DIY TIN Cans during my hunt for balloon ideas, I adapted this can can have an idea of drum from a bizarre and mini-echo momma. Play with balloons with this fun balloon science activity! Since the father's day is this next Sunday, and father of him was a drummer, I thought they would make a perfect gift from Henry! I could fill the tin can drums with some goodies before Sunday! They make a large gift box. As always, working next to Henry usually proves to be more productive to look and tell him what to do. Henry started painting with green paint. He covered the whole tin with paint, inside and out! No problem on a sharp edge on these cans, these came from the grandmother. We had to raise his recycling basket because his opener creates a nice fluid edge! He added a splash of orange and blue to his pond him can for a while. Painted only that can, but I was impressed by the amount of time he spent to complete him completely. Once the paint is dry, he cuts the end of a balloon and slipped it over the top of the tin can. If it ends with a small bubble in the middle of the balloon, remove it and snuffed a little more out of the end and try again. I added a second layer of balloons to two of the tin chopsticks and drums and holes cut into it as momma momma did with its tin battery. I also added rice, pasta and some rocks to each of the tin can drums to make shaker! Henry shook them to listen to their different noises. He also drummed aloud, being very funny! Good father day, dad! Love, Henry & George Our Others Tin Tin Can Activities: DIY Windchimes Tin Can Bore Forest On: 1) A Postal Tube, or if you don't have one, any other tube will work 2) Three different types of plastic (the best it's the best) 3) Three soda cans, clean them first! 4) A popsic stick5) A small handful of wooden skewers6) A rubber band7) A bit of foil 8) A roll of adhesive tape9) A pair of scissors10) A hot cutter11) Grue gun and some sticks for gun a Hot glue 12) Optional: some black painting and some blue paint really adorn it when all my children are at home from school for the summer. Most of the time, ie. When they told me they are bored for eighty thousand times in ten minutes I start to love him a little less ... I usually tell them to go out when they are bored, but there are moments in which or time or seasonal allergies keep us at home , And that's why I like to have a stock of Easy Kid craft to mate them. Today I'm a drum made by boys and Kazoo. Both are super easy to use using cheap materials you probably already have at home. Milk battery can be easy to make and use graduated cans means that children can actually play different notes. My daughter asked to tie them all together so that she could wear them around her neck while we march aroundAdd in the kazoo and she's a man band! A band of girls. A band. You know what I mean. Here's a video showing how to drum set (written instructions follow): To make drums, you'll need: security can open that doesn't leave sharp edges I ordered this from Amazon and I really like it! balloons I used 7-inch balloons on smaller balloons and balloons from 9 inch on larger rubber rods plugs and beads for drums (optional) To make a drum, remove the top from a can using the safety opening, remove the contents, and wash and dry the can. Then cut the bottom from a balloon and stretch it tightly over the open top of the can. Fix the ball with a rubber band, and your drum is ready to play! To make the drums, I bought the dowels at the craft shop and beads with holes of the same diameter as the dowels. I just used school glue to glue the dowels into the heads. The kazoo is really easy to do too! 1 I Collect two large ice sticks, two toothpicks, a thick band of rubber and two thin bands of rubber. 2 Place the thick rubber band around a popsicle stick, end to end as shown in the photo. Slide a toothpick under the rubber band near one end, as shown. 3 Place the second popsicle stick on top of the first and protect them together with a thin band of rubber. 4 Place the other toothpick between the ice sticks at the other end (this above the thick rubber band) and secure it ends with another rubber band. 5 Cut the stitches from the teeth. Jump or hump in the kazoo to make noise. Still an easy indoor craft activity to have in your pocket the next time the weather, allergies, or colds keep your kids inside! We've been dealing with some allergies at home this season, and I recently discovered Boogie Wipes. They are a wet wipe infused with saline, a natural ingredient that dissolves knot and mucus. Thanks to Boogie Wipes for sponsoring this post. All the opinions expressed here are mine. These things are unbelievable! They are moist, which makes them more comfortable to use than fabrics, but unlike other wipes they do not have drying chemicals such as alcohol or chlorine, which means they do not dry or irritate the sensitive skin of children. My younger children usually HATE blow their noses, and they will spend all day sniffing to avoid doing it (pushes me!) but they both love Boogie Wipes. No more irritation or red nose. I bought Boogie Wipes in the fresh scent, which is light and pleasant, but there is also a scent of grapes that many children prefer. After using them for a few days, I can only imagine how much I would have loved Boogie Wipes when my kids were If you want to give boogie wipes a test, click here for a \$ .50 coupon discount. You can also find tips and tricks to treat seasonal allergies here. Find out more, visit Boogies Wipes on Facebook, Instagram, Pinterest, Twitter or YouTube. YouTube. YouTube.
